Index

Introduction **1**

I Modules and matrices **3**

1 The Theorem of Krull-Schmidt 3

2 Finitely generated modules over a PID 5

3 The primary decomposition 7

4 Modules over $\mathbb{F}[x]$ defined by matrices 8

5 The rational canonical form of matrices 10

6 Jordan canonical forms 12

7 Exercises 15

II The geometry of classical groups **17**

1 Sesquilinear forms 17

2 The matrix approach 18

3 Orthogonality 20

4 Symplectic spaces 22

5 Some properties of finite fields 24

6 Unitary and orthogonal spaces 25

6.1 Unitary spaces 25

6.2 Quadratic Forms 26

6.3 Orthogonal spaces 27

7 Exercises 33

III The finite simple classical groups **35**

1 A criterion of simplicity 35

2 The projective special linear groups 37

2.1 The action on the projective space 37

2.2 Root subgroups and the monomial subgroup . . . 39
2.3 Simplicity and order . . . 41
3 The symplectic groups . . . 42
4 The orthogonal groups . . . 44
5 The unitary groups . . . 47
6 The list of finite classical simple groups . . . 48
7 Exercises . . . 49

IV Some facts from representation theory **51**
1 Irreducible and indecomposable modules . . . 51
2 Representations of groups . . . 55
3 Exercises . . . 60

V Groups of Lie type **63**
1 Lie Algebras . . . 63
2 Linear Lie Algebras . . . 64
3 The classical Lie algebras . . . 66
3.1 The special linear algebra $\mathbf{A}_\ell$ . . . 66
3.2 The symplectic algebra $\mathbf{C}_\ell$ . . . 66
3.3 The orthogonal algebra $\mathbf{B}_\ell$ . . . 68
3.4 The orthogonal algebra $\mathbf{D}_\ell$ . . . 69
4 Root systems . . . 69
4.1 Root system of type $\mathbf{A}_\ell$ . . . 72
4.2 Root system of type $\mathbf{B}_\ell$ . . . 72
4.3 Root system of type $\mathbf{C}_\ell$ . . . 73
4.4 Root system of type $\mathbf{D}_\ell$ . . . 73
5 Chevalley basis of a simple Lie algebra . . . 74
6 The action of $\exp \operatorname{ad} e$, with e nilpotent . . . 77
7 Groups of Lie type . . . 79
8 Uniform definition of certain subgroups . . . 80
8.1 Unipotent subgroups . . . 80
8.2 The subgroup $\langle X_r, X_{-r} \rangle$ . . . 81
8.3 Diagonal and monomial subgroups . . . 82
9 Exercises . . . 84

VI Maximal subgroups of the finite classical groups **85**

1 Some preliminary facts 85

2 Aschbacher's Theorem 86

3 The reducible subgroups $\mathcal{C}_1$ 87

4 The imprimitive subgroups $\mathcal{C}_2$ 88

5 The irreducible subgroups $\mathcal{C}_3$ 90

6 Groups in class $\mathcal{S}$ 91

6.1 The Suzuki groups $Sz(q)$ in $\mathrm{Sp}_4(q)$ 91

6.2 Representations of $\mathrm{SL}_2(\mathbb{F})$ 91

7 Exercises 92

References **93**
